HOME BASED NEWBORN CARE
Operational Guidelines

Ministry of Health and Family Welfare
Govt. of India, 2011
Acknowledgements

These Operational Guidelines for Home Based Newborn Care (HBNC) were developed based on wide consultation, and represent the hard work of a large number of individuals and institutions. We sincerely acknowledge the contributions of professional experts, programme managers and government counterparts. Dr P.K. Prabhakar (MOHFW) coordinated the development of these operational guidelines with assistance from experts in the National Health Systems Resource Centre (NHSRC), United Nations International Children’s Fund (UNICEF), the World Health Organization (WHO) and UNOPS- Norway India Partnership Initiative (UNOPS – NIPi). Ms. Anuradha Gupta (Joint Secretary, RCH) and Dr Ajay Khera (MOHFW) reviewed the draft and provided valuable insights.

Foreword

Reducing infant and child mortality is one of the foremost goals of National Rural Health Mission. The country as a whole has made significant progress in reducing Infant Mortality Rates, (IMR). However, it is now clear that a high proportion of the infant death burden is related to newborn deaths, and further gains in reducing IMR are likely only through a focused effort at implementing evidence based cost effective interventions that affect neonatal health outcomes. There is sufficient evidence to demonstrate that despite the increasing numbers of institutional deliveries a substantial proportion of neonatal deaths occur in the home. Thus the provision of Home Based New Born (HBNC) care is critical.

The NRHM offers several existing platforms that need to be used more effectively to promote HBNC. The presence of a trained ASHA in every village in most parts of the country, a second ANM at the sub-centres in several areas, increasing numbers of women accessing health care facilities for delivery, and the institutionalization of the monthly Village Health and Nutrition Days provide unprecedented opportunities for making quantum improvements in infant, newborn and child health in India.

These Operational Guidelines provide the framework and guidance to enable a coherent home based newborn care strategy. The guidelines are expected to serve as a reference tool and facilitate the states in planning necessary interventions. They are based on sound public health evidence for effectiveness, efficiency and equity, and list the tasks and activities to be undertaken at each level. The states will need to ensure appropriate training of ASHA in the competencies required, as her services are at the core of the strategy. I am confident that these operational guidelines will prove to be very useful for programme officers in planning; implementing and monitoring home based newborn care. I hope that these guidelines assist the states to rapidly scale up home based newborn care as this will prove to be critical in enabling the country to achieve its child survival goals.

P.K. Pradhan,
Special Secretary and Mission Director

Purpose of the Guidelines

The purpose of these guidelines is to enable the states to develop and operationalize a strategy to ensure that all newborns are provided with home based care, through a series of visits by the ASHA, and ensuring that she has the skills and support to do so. Together with the Janani Suraksha Yojana (JSY) and the Janani Shishu Suraksha Karyakram (JSSK), the HBNC ensures that mother and newborn have access to services in order to ensure positive health outcomes. The guidelines are divided into two sections. The first section discusses the trends, rationale and the policy frameworks for HBNC. The second section discusses the skills and support that the ASHA requires, actions to be taken at state and district levels, and monitoring of the programme. The annexures consist of the ASHA’s home visit form, the first visit to the newborn form, material for IEC displays and the contents of the ASHA kits and communication package to enable the provision of HBNC.
Section 1
Rationale for Home Based
New Born Care
1.1 Defining Neonatal and Infant Deaths

1. **Neonatal Mortality**: Deaths occurring during the neonatal period, commencing at birth and ending 28 completed days after birth.
   a) **Early Neonatal mortality**: Deaths occurring during the neonatal period, from birth to seven days after birth.
   b) **Late neonatal mortality**: Deaths of the infants occurring during the neonatal period, from the eighth day after birth to 28 completed days after birth.

2. **Still Births**: Death of foetus after 28 completed weeks of pregnancy, or the birth of a dead fetus which weighs over 1000 gms or is more than 35 cm body length.

3. **Perinatal Mortality**: Deaths occurring after 28 completed weeks of gestation (still births) and up to seven completed days (early neonatal deaths) after birth.

4. **Infant Mortality**: Death occurring in a child before it reaches the age of one year.

All these are expressed per 1000 live births in one year, which is defined as the rate. Thus for example, Neonatal Mortality Rate is the number of neonatal deaths in a given year per 1000 live births in that year.

1.2 Trends in Neonatal and Infant Mortality

Infant Mortality Rate (IMR) has declined from 146 in 1951 to 50 in 2009. However, as the data in Figure 1 show, the decline in neonatal mortality rates have been slow in the last two decades. Each year, of the almost 27 million infants born in the country, about 0.88 million die before they complete one month of life and a total of million die before their first birthday. NMR therefore now constitutes nearly 68% of the total IMR. Any further reductions in IMR reduction can only come from declines in NMR.

The country has laid down ambitious goals for reduction of infant and child mortality. (Table 1). The current status of the key national infant and child health indicators is summarized below. At the present rate of progress, it is unlikely that the country will achieve the national goals laid out in the Eleventh Five-Year Plan.

![Figure 1: Five year trends in overall Infant Mortality Rate and Neonatal Mortality Rate (per 1000 live births)](image-url)
1.3 What do newborns die of?

Infections (including sepsis, pneumonia, diarrhoea and tetanus), prematurity, and birth asphyxia, are the major causes of death in the neonatal period. The recent Lancet Million Death Study, in which about 2.35 million estimated number of under five deaths, were reviewed reviewed, showed that of the neonatal deaths, the main causes of death in order of frequency were preterm and low birthweights, neonatal infections, and birth asphyxia.

1.4 When do Newborns Die?

The most vulnerable period of a newborn’s life is the period during birth and the first week of life. This is illustrated by Figures 5a and 5b, which are based on an ICMR study. As Figure 5a shows, nearly three-quarters of all neonatal deaths occur during the first week of life. The remaining 25% of deaths occur between weeks two to four. Figure 5b, shows that nearly 40% of deaths occurring within the first 24 hours of life, or on the first day, with the next vulnerable period being around Day 3 which accounts for about ten percent of deaths. This distribution of neonatal deaths is also borne out by other studies at national and global levels.
Figure 5a: Distribution of Newborn deaths in the first four weeks

Figure 5b: Distribution of Newborn deaths in the first week of life
1.5 What are effective technical interventions to reduce Neonatal Mortality

Effective interventions to reduce neonatal deaths span both maternal and neonatal care and encompass interventions for appropriate care during pregnancy, care for the mother and newborn during and immediately after delivery, and care for the newborn during the first weeks of life.

1.6 Rationale for Home Based Newborn care.

➔ In cases of institutional delivery, where the baby and mother are discharged after 48 hours according to current guidelines, it is expected that care for the newborn during this period is provided in the institution. When the mother and baby return home, although the newborn has crossed the critical first day, there is still the remainder of the first week and month during which neonatal mortality could be as high as 54%, and for which care has to be provided. Any illness during this period could result in the newborn dying at home, unless the baby is provided with appropriate care or referred to a facility equipped to treat sick newborns.

➔ A significant proportion of mothers prefer to return home within a few hours after delivery, which means that home based newborn care needs to be available even for such babies born in institutions to tide them over the first day and thereafter. Although this is not desirable and all efforts should be made to convince the mothers to stay in the institutions for the first 48 hours, existing evidence shows that while at an all India level nearly 45% of mothers return home before 48 hours. However in this percentage is very low in states of Bihar (15.3%), Haryana (29.2%), Nagaland (21.1%) and Orissa (28.3%). (Coverage Evaluation Survey, 2009, UNICEF)

➔ Despite the impressive increases in institutional deliveries there is a persistence of home deliveries ranging from between 25% to 50% across the states. For such deliveries, home based newborn care, is essential even on the first
day. There is evidence that many home deliveries are not conducted by skilled birth attendants, particularly in underserved areas, and among the marginalized.

The strategy of universal access to home based newborn care must necessarily complement the strategy of institutional delivery to achieve a significant reduction in postpartum and neonatal mortality and morbidity. Even in institutional deliveries, the quality and access to skilled care during the critical period of birth, immediately after birth and on the first day should be ensured, to ensure positive health outcomes. HBNC also needs the ready access and backing from Sick Newborn Care Units (SNCU) and Newborn Stabilization Units (NBSU) that are well staffed, well equipped and are functioning effectively.

1.7 Policy Frameworks for the provision of Home Based New Born Care

Home Based Newborn Care is well articulated in government policy aimed at improving newborn survival. The key policy documents that articulate this are the XI plan document (2007-2012) and the Minutes of meeting from the Mission Steering Group, dated June 21, 2011.

Excerpts from the XI Plan Document

“3.1.130 Home-based neonatal care will be provided, including emergency life saving measures.” ....... During the Eleventh Five Year Plan, ASHAs will be trained on identified aspects of newborn care during their training. ....... To supervise and provide onsite training and support to ASHAs, mentor- facilitators will be introduced for effective implementation. The national strategy during the Plan will be to introduce and make available high-quality HBNC services in all districts/areas with an IMR more than 45 per 1000 live births. Apart from performance incentive to ASHAs, an award will be given to ASHAs and village community if no mother-newborn or child death is reported in a year.”

Excerpts from the Mission Steering Group Minutes

”....”"The proposal as recommended by the Empowered Programme Committee (Agenda item No. 11- proposed incentive of Rs.250 for a set of six home visits to assess the new born as well as post partum care of mother) was approved by MSG. MSG also decided that the incentive amount would be paid one time after 45 days of delivery subject to the following:
- Recording of weight of the new born in MCP card
- Ensuring BCG, 1st dose of OPV and DPT vaccination
- Both the mother and the newborn are safe till 42 days of the delivery, and
- Registration of birth has been done.

1.8 Who is the provider of HBNC?

It is important for all peripheral providers of services to be aware of the principles and practice of Home Based Newborn care. This includes the AWW, the ANM and the Medical officers. However, as envisaged in the XI plan, the main vehicle to provide this is the ASHA. The reasons for this include:

1. She is resident and available in every village.
2. She is being equipped with the skills and support to provide such care.
3. The findings of a recent evaluation show that the ASHA is much more likely to visit the newborn and postpartum mother at home than the ANM or AWW, and is also more likely to be consulted for care of the sick child. The ASHA is emerging as the first port of call for sick newborns and children.
4. The ASHA is supported and guided by the health system which is directly responsible for newborn and child survival. This relationship with the health system is essential for facilitating referral.
Section 2

Operationalizing HBNC
2.1 Objectives of HBNC

The major objective of HBNC is to decrease neonatal mortality and morbidity through:

- The provision of essential newborn care to all newborns and the prevention of complications
- Early detection and special care of of preterm and low birth weight newborns
- Early identification of illness in the newborn and provision of appropriate care and referral
- Support the family for adoption of healthy practices and build confidence and skills of the mother to safeguard her health and that of the newborn.

2.2 Key activities in HBNC

The key activities in HBNC constitute the provision of:

1. Care for every newborn through a series of home visits by a trained health worker in the first six weeks of life. In most state contexts this health worker is the ASHA.
2. Information and skills to the mother and family of every newborn to ensure better health outcomes.
3. An examination of every newborn for prematurity and low birth weight.
4. Extra home visits for preterm and low birth weight babies by the ASHA or ANM, and referred for appropriate care as defined in the protocols.
5. Early identification of illness in the newborn and provision of appropriate care at home or referral as defined in the protocols.
6. Follow up for sick newborns after they are discharged from facilities.
7. Counselling the mother on postpartum care, recognition of postpartum complications and enabling referral.
8. Counselling the mother for adoption of an appropriate family planning method.

In case of those deliveries that occur on the way to the health institutions or at home out of choice, despite motivation for institutional delivery, the ASHA must be equipped with the skills and competencies required to provide appropriate newborn care.

This would exclude the states of Himachal Pradesh, Goa, Puducherry, Daman and Diu, and the non tribal areas of Tamil Nadu.

2.3 Skills needed by the ASHA in the provision of HBNC

1. Mobilize all pregnant mothers and ensure that they receive the full package of antenatal care.
2. Undertake birth planning and birth preparedness with the mother and family to ensure access to safe delivery.
3. Provide newborn care through a series of home visit which include the skills for:
   a. Weighing the newborn,
   b. Measuring newborn temperature,
   c. Ensuring warmth,
   d. Supporting exclusive breastfeeding through teaching the mother proper positioning and attachment for initiating and maintaining breastfeeding,
   e. Diagnosing and counselling in case of problems with breastfeeding
   f. Promoting hand washing,
   g. Providing skin, cord and eye care,
   h. Health Promotion and counseling mothers and families on key messages on newborn care which includes discouraging unhealthy practices such as early bathing and bottle feeding,
   i. Ensuring prompt identification of sepsis or other illnesses.
4. Assessing if the baby is high risk (preterm or low birth weight), through the use of protocols and managing such LBW or preterm babies through
   a. Increasing the number of home visits,
   b. Monitoring weight gain,
   c. Supporting and counseling the mother and family to keep the baby warm and enabling frequent and exclusive breastfeeding,
   d. Teaching the mother to express breastmilk and feed baby using cup and spoon or paladai, if required.
5. Detect signs and symptoms of sepsis, provide first level care and refer the baby to an appropriate center. If the family is unable to go, the ASHA should ensure that the ANM visits the sick newborn on a priority basis.
6. Recognize postpartum complications in the mother and refer appropriately.
7. Counsel the couple to choose an appropriate family planning method.
8. Use the checklist for first Visit to the Newborn (Annexure 1a) and Home visit form (Annexure 1b) to remind her to ask the key questions and ensure that she follows the steps of examination and counseling the mother.
9. Provide immediate newborn care, in case of those deliveries that do not occur in institutions (home deliveries/ deliveries occurring on the way to the institution)

2.4 Capacity Building of the ASHA

The activities to be provided as part of home based care for the newborn and the skills that the ASHA is expected to acquire are taught in Modules 6 and 7. The content of these modules cover the skills listed in the section above. The ASHA is trained in these skills through four rounds of training of five days each by ASHA trainers using a trainer module. All four rounds are expected to be completed within one year. After each round of training the ASHA is evaluated for knowledge and skills. This is followed by the process of certification of the ASHA. There is a gap of about ten to twelve weeks between each round of training during which she is supported and mentored to practice the skills learnt during the training. The ASHA is to be provided on the job support and mentoring by the facilitators. Facilitators are trained in the use of supervisory checklists to ensure accurate application of skills by the ASHA to provide HBNC.

2.5 Support to the ASHA to ensure positive newborn health outcomes

For the ASHA to be effective in providing HBNC and to enable reductions in neonatal mortality, the following support needs to be provided:

1. Payments: The ASHA is to be paid Rs. 250 for conducting home visits for the care of the newborn and post partum mother. The schedule of payment is as follows:
   - Six visits in the case of institutional delivery (Days 3, 7, 14, 21, 28 and 42), and
   - Seven visits in the case of home delivery (Day 1, 3, 7, 14, 21, 28, and 42).

   The amount is to be paid based on the completed home visit form and first examination of the newborn, forms, validated by the facilitator. The payments to the ASHA should be made on time and with dignity. The payments are made on the 45th day (using the mechanisms for JSY payment) subject to the following:
   (i) Ensuring that birth weight is recorded in the Maternal and Child Protection (MCP) Card
   (ii) Ensuring that the newborn is immunized with: BCG, first doses of OPV and DPT, and entered into the MCP card
   (iii) Ensuring Birth Registration
   (iv) Both mother and newborn are safe until the 42nd day of delivery

2. Ensuring field level support:
   - The ASHA should be visited at least twice a month by the facilitator to provide on the job mentoring, monitoring and support. Use of supervisory checklists by the facilitators is important to support the ASHA in providing HBNC.
   - Monthly review meetings at the level of the PHC are to be held for problem solving and building the linkages for referral support.
Refresher trainings should be held at least once every three months to ensure knowledge and skill retention. The ASHA’s kit should be replenished regularly and the equipment should be reviewed and refurbished as required. (Annexure 3 has a list of the drugs and equipment needed by the ASHA to provide HBNC).

3. **Enabling Health Promotion by the ASHA:** The ASHA is expected to provide interpersonal one communication to the mother and health education to the family, and community to promote positive health practices for the care of the newborn and postpartum mother. The ASHA is expected to be equipped with a communication package to enable such health education.

4. **Other forms of support:** At the village level the ASHA is to be supported by a functional Village Health, Sanitation and Nutrition Committee/Women’s health committee. She also needs the encouragement and support from the ANM and the Medical officers particularly to ensure responsive referral which will add to her credibility and improve her performance. She is also to be provided with an ID card and there needs to be official acknowledgement of her contribution through the institution of awards, for specific outcomes, e.g no newborn deaths in an entire year. Any grievances are to be addressed promptly through grievance redressal mechanisms.

### 2.6 Actions at the state and district levels

States will ensure that the scheme is widely publicized, that the drugs and consumables are available, that transport to an appropriate referral facility is readily available, and a grievance redressal facility is established at all health care institutions. The key steps to be taken at the state and district levels are listed below:

#### I. **Actions at State level:**
- Issue Government order on Home Based Newborn Care and nominate a State Nodal Officer.
- Ensure that a state level resource center/centers are created to provide the training support for district and block levels to ensure high quality training of ASHA and facilitators.
- Ensure that training of ASHA in Modules 6 and 7 is completed within one year and that she is certified to provide HBNC.
- Ensure support and supervisory mechanisms for the ASHA to undertake HBNC with at least two on site mentoring visits every month by a supervisor/facilitator.
- Institute a grievance redressal mechanism for ensuring that the commitments are fulfilled in letter and spirit.
- Ensure regular procurement and availability of drugs and consumables for the ASHA kit and in the public health institutions. (Annexure 2)
- Establish district wise assured referral linkages.
- Provide required finances and necessary administrative steps/G.O.s for the above activities.
- Financially empower the district and facility in-charges for the above activities.
- Regularly monitor and report on designated formats at specified periodicity.
- Review the implementation status during district CMOs meetings and quarterly review meetings of district nodal officers and district community mobilizers.

#### II. **Actions at District level:**
- Nominate a District Nodal Officer.
- **Ensure that the support system for ASHA:** district community mobilizer, block community mobilizer and facilitators are in place.
- Circulate the G.O. on free entitlements to all facility in-charges.
- Widely publicize free entitlements in public domain.
- Institute a grievance redressal mechanism for ensuring that the commitments are fulfilled in letter and spirit.
- Enable and monitor the quality of ASHA training in Modules 6 and 7.
- Regularly review the stocks of drugs & consumables for ensuring availability at the in the ASHA kit and in public
health institutions.
- Review referral linkages and their utilisation by beneficiaries.
- Provide required finances / empowerment for utilisation of funds to the Block MOs and facility in-charges for the above activities, particularly in emergency situations/ stock outs.
- Regularly monitor & report on designated formats at specified periodicity.
- Review the implementation status during Block MOs/MOs meetings.

Implementation of the scheme is expected to ensure the following

(i) Dissemination of the entitlements in the public domain:
- Widely publicize these entitlements through print and electronic media.
- Display them prominently in all Government health facilities e.g. SCs, PHCs, CHCs, SDHs and DHs/FRLUs (main entrance, neonatal wards and outside outpatient areas) as per the enclosed format at Annexure – 3.
- IEC budget sanctioned in the Project Implementation Plan (PIP) under RCH/NRHM can be utilised for this.

(ii) Ensure regular and timely supply of drugs and consumables:
- Ensure regular procurement, uninterrupted supply and availability of drugs & consumables and regular replenish-ments for ASHA drug kits.
- Empower the head of the District / health facility to procure drugs & consumables in case of potential stock outs.
- Ensure the quality and shelf life of drugs supplied to the ASHA.
- Ensure a proper inventory of drugs and consumables at each health facility for timely reporting on stock outs and export and a stock card with each ASHA.
- Ensure that first expiry drugs and consumables are used first at every level.

(iii) Referral and Transport:
- Ensure universal reach (no area left uncovered), with 24 x 7 referral services for and providing assured referral transport.
- State is free to use any suitable model of transportation e.g. Government Ambulances, EMRI, referral transport PPP model etc.
- Establish call centre(s) with a single toll free number, at district or State level.
- May provide ambulances/ vehicles with GPS, for effective tracking and management.
- Establish linkages for the inaccessible areas (hilly terrain, flooded or tribal areas etc) to the road head / pick up points.
- Widely publicize the free & assured referral transport through print and electronic media.
- Monitor and supervise services at all levels, including utilization of the each vehicle and number of cases transported.

(iv) Grievance Redressal:
- Prominently display the names, addresses, emails, telephones, mobiles and fax numbers of grievance redressal authorities at health facility level, district level and state level, and disseminate them widely in the public domain.
- Set up help desks and suggestion/complaint boxes at Government health facilities.
- Keep fixed hours (at least 1 hour) on any two working days per week, for meeting the complainants and addressing their grievances related to free entitlements.
- Take action on the grievances within a suitable timeframe, and communicate to the complainants.
- Maintain proper records of actions taken.

(v) Funds
- Reflect the requirement of funds in the state PIP under NRHM in addition to resources available from State budget.
Monitoring

The following indicators will be used to measure the programmatic outcomes.

<table>
<thead>
<tr>
<th>Indicators</th>
<th>Process</th>

Steps of monitoring -

1. ASHA’s home visit forms can be used to assess the number and content of her visits. ASHAs have to fill the home visit form during every visit to the household with a newborn.
2. ASHA facilitator should verify and sign the home visit forms filled by ASHA during the monthly meeting with the ASHAs.
3. Based on the performance of the ASHAs, the ASHA facilitator should issue and submit a signed token/ slip to the PHC staff (clerk/ accountant).
4. The ANM should review the performance of all ASHA with respect to home visits for newborns in her sub center area during the VHND/village visit.
5. Payment to ASHAs should be made by the PHC staff (clerk/accountant) after taking approval from the MO/PHC who will review the implementation during meetings.
6. At district level, the district nodal officer should monitor and follow up on the implementation on the programme. The CMOs would also review the progress during the CMO’s meeting at district level.
7. The State nodal officer will monitor the implementation and effectiveness of the programme. State Mission Director would also review the progress of the programme in each district with district CMOs at the CMOs meeting held at state level.
8. At the National level, the scheme will be monitored by National Health System Resource Centre, under guidance and support from Child Health Division, Ministry of Health & Family Welfare, Government of India.
Annexure 1a
First examination of the newborn

(Examine one hour after the birth but in any case within six hours from the birth. If ASHA is not present on the day of delivery then fill the form on the day of her visit and write the date of her visit).

**Part I:**

1) Date of Birth ____________________________
2) Pre-term cut-off date: __________ Is baby pre-term? Yes/No
3) Date of first examination ____________________________

**Time:** Early morning Morning Afternoon Evening Night ______ Hrs ______
4) Does mother have any of the following problems?
   a. Excessive bleeding Yes/No
   b. Unconscious/fits Yes/No

**Action:** If yes, refer immediately to hospital 
**Action taken:** Yes/No

(In case of stillbirth, do not perform further examination but complete the examination of the mother as per home visit form on day 2, 3, 7, 14, 21, 28)

5) What was given as the first feed to baby after birth? ________
6) At what time was the baby first breastfed? Hrs ______ Min ______

**How did baby take feed? Mark _**
1) Forcefully
2) Weakly
3) Could not breastfeed but had to be fed with spoon
4) Could neither breastfeed nor take milk given by spoon
5) Does the mother have breastfeeding problem? Yes/No
6) Write the problem ____________________________
7) If there is problem in breastfeeding, help the mother to overcome it

**For Supervisor#**

Correct/Incorrect
Correct/Incorrect
First examination done
Days: ___ Hrs: ___

After birth
Yes/No/NA

**Part II:**

First examination of the baby
1) Temperature of the baby (Measure in axillar and record): ________
